

Project Setup Documentation – Zariya Ethnics E-Commerce Frontend

1. Objective

The objective of the Zariya Ethnics E-Commerce Frontend Project is to build a modern, responsive, and user-friendly online shopping platform for ethnic fashion products. The project focuses on providing a seamless shopping experience through intuitive navigation, product browsing, wishlist management, shopping cart functionality, and secure checkout.

2. Technologies Used

Technology	Purpose
React.js	Frontend Development
Vite	Fast Build Tool
React Router DOM	Navigation and Routing
CSS3	Styling
JavaScript (ES6+)	Application Logic
Git & GitHub	Version Control
Figma	Wireframe & UI Design

3. Development Environment Setup

Step 1: Install Node.js

Download and install Node.js from the official website.

- Download LTS Version
- Verify installation:

```
node -v
```

```
npm -v
```

Step 2: Create React Project Using Vite

Open Terminal and run:

```
npm create vite@latest zariya-ethnics -- --template react
```

Navigate to project folder:

```
cd zariya-ethnics
```

Install dependencies:

```
npm install
```

Step 3: Run Development Server

Start the application:

```
npm run dev
```

The application will run on:

```
http://localhost:5173
```

Step 4: Install React Router

Install React Router for page navigation:

```
npm install react-router-dom
```

Step 5: Initialize Git Repository

```
git init
```

```
git add .
```

```
git commit -m "Initial Project Setup"
```

Connect GitHub Repository:

```
git remote add origin <repository-url>
```

```
git push -u origin main
```

4. Project Folder Structure

```
zariya-ethnics/

```

5. Folder Description

assets/

Stores images, logos, icons, fonts, and other static files.

components/

Contains reusable UI components such as:

- Navbar
- Footer
- Buttons
- Product Cards
- Search Bar

pages/

Contains application pages:

- Home Page
- Product Details Page
- Login Page
- Register Page
- Wishlist Page
- Cart Page
- Checkout Page

layouts/

Stores common layouts shared by multiple pages.

routes/

Manages application routing using React Router.

services/

Contains API service files and business logic.

context/

Manages global application state such as:

- Authentication
- Shopping Cart
- Wishlist

hooks/

Stores reusable custom React hooks.

styles/

Contains:

- Global CSS

- Typography Styles
- Color Variables
- Component Styles

data/

Stores sample product and category data.

6. Application Pages

Based on the Zariya Ethnics wireframe, the application includes:

Home Page

- Navigation Bar
- Hero Banner
- Categories Section
- Trending Products
- Offers Section
- Top Picks Section
- Footer

Product Details Page

- Product Images
- Product Information
- Size Selection
- Add to Cart
- Add to Wishlist

Authentication Pages

- Login
- Registration

Wishlist Page

- Saved Products
- Category Filters

Cart Page

- Selected Products
- Quantity Management

Checkout Page

- Payment Methods
- Order Summary
- Place Order Button

7. Design System

Color Palette

Color Name HEX Code

Lavender White	#F4EFFA
Russian Violet	#2F184B
Tekhelet	#532B88
Amethyst	#9B72CF
Wisteria	#C8B1E4

Typography

Heading Font

Poppins

Body Font

Inter

8. Main Features

- User Authentication
 - Product Listing
 - Product Search
 - Product Details
 - Wishlist Management
 - Shopping Cart
 - Checkout Process
 - Responsive Design
 - Category Filtering
-

9. Build for Production

Generate production build:

npm run build

Preview production build:

npm run preview

10. Conclusion

The Zariya Ethnics E-Commerce Frontend Project follows a scalable React + Vite architecture with a modular folder structure. The setup process, component organization, routing system, and design standards ensure maintainability, performance, and a consistent user experience across the platform.

This format is suitable for submitting as "**Project Setup (React/Vite, Folder Structure)**" documentation in your internship report or GitHub repository.
